

Litter record

Each puppy from birth to a new home: weights, the dates your vet sets, the microchip and the new owner. One row per puppy, the same order on every page.

Weights are for you to fill in: there are no target weights here. Deworming, vaccinations and vet checks happen when your vet sets them: write the dates in.

The litter

Dam (mother)

Sire (father)

Breed

Date of birth

Puppies: males, females

Vet and phone

Daily weights (oz), days 1 to 14 after birth

No. and ID collar	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Day 8	Day 9	Day 10	Day 11	Day 12	Day 13	Day 14

What each new owner gets

- Copies of the vaccination and deworming records, with the dates of the next ones your vet gave.
- The microchip number and the registry, so the new owner can register the chip in their own name.
- Feeding instructions: the food, how much and how often, as you have been feeding the puppy.
- The registration application, if the litter is registered, and a copy of the agreement you both signed.

Notes: feeding, the dam, anything you want to show the vet

In Pettify each new owner keeps their puppy's microchip number, vaccinations with reminders and weight chart in the puppy's profile.

Breeder's personal record. Not an AKC or kennel club form, and not a veterinary document: the vet sets the dates and judges growth.
